

Open Progress (Guardians of Governance fork)

Map election promises from coalition agreements to real debates in parliamentary bodies to show **real progress of governance** based on actual data.

- ▶ Detect/formalise keywords of coalition agreements/action plans of government for automatic search.
- ▶ Natural language analysis of discussions in parliament (passing legal acts, information inquiries by opposition, press conferences, results of voting etc).
- ▶ Visualise results using progress bars and display/highlight parts of text that the results are based on.
- ▶ Use data from <https://aavik.riigikogu.ee/> test API. ▶ Need data analysts, data visualisers plus some UX/scripting. ▶ Some work done <https://github.com/infoaed/openprogress>.

This is first iteration to hack our parliamentary democracies for more reasonable and measurable election promises.
